1. Introduction

The intent of this marketing plan is to produce a new console which will target both the PC gaming market and the console gaming market, as well as individuals who want the simplicity of a console and the capabilities of a PC. Our goal is to create a product that can differentiate itself from our competitors through this hybridization of PC and console aspects. To accomplish this, we'll grant a traditional PlayStation experience while applying improved hardware and capabilities never before seen on a PlayStation to further enhance the user experience. We'll market through social media, traditional ads, and sell the product through our typical omnichannel system both in-stores and online. In order to see the specific aspects that consumers desire, we'll utilize surveys, questionnaires, and in-depth market analysis to find key aspects that they're looking for in the new product. We will utilize all of this to innovate upon our consoles and produce a superior product for our consumers.

2. Company Description and Location

The Sony Group Corporation was founded in 1946 as Tokyo Tsushin Kogyo K.K. The company was founded by Masaru Ibuki and Akio Morita and the two of them sought to create a company that wouldn't fall to the same issues that larger corporations held (Rebuilding From the Ashes). Their main goal was innovation with an emphasis on a spirit of freedom so that they could "do what has never been done before" (About Sony Group). Since then, the company has maintained that stance and goal, working to continuously innovate and improve.

In the modern day, the company has remained based in Japan, having their main headquarters in Minato, however, the company has expanded out from Japan, possessing various regional headquarters throughout the United States as well as having an arm of the company located within America, called Sony Corporation of America (Corporate Data; Who We Are). The company as a whole has a foothold in a variety of industries, such as in home appliances, technology, movies and television, music, and video games. Video games in particular is an area in which Sony excels through the PlayStation brand, with a significant portion of Sony's company and revenue being related to PlayStation and its related products (*Q2 FY2025 Consolidated Financial Results*).

Sony believes that it has to expand on its existing technologies and continue to innovate in order to push the brands and IPs it holds further to reach greater heights of potential. The following marketing plan outlines how Sony will both improve upon its current products as well as expand into a new potential market which it hasn't before.

3. Strategic Focus and Plan

Mission

The core mission of Sony is to inspire curiosity and to create passion within its customers (Sony's Mission/Vision). Sony's vision is to use its passion and ingenuity to continue to challenge itself. It will continue to expand into different markets and domains, growing its expansive portfolio of products and services. All of this is for the improvement of both the company and its consumers.

Goals

The core goals of Sony's current plans are to create greater synergy within itself and its businesses, as well as to create greater synergies with its partners (Sony Corporate Report 2025, pg. 8). The company also seeks to improve upon its sustainability and environmental efforts. They seek to reduce their overall emissions, use renewable sources of electricity, improve their renewable plastic usage, and reduce their plastic usage as a whole, seeking to remove its usage entirely for products under weighing 5 kg (Sony Corporate Report 2025, pg. 26). Another goal for the company itself is to increase its overall earnings and the total payout ratio, to 4.8 trillion yen and 40% respectively by 2026 (Sony Corporate Report 2025, pg. 31). Lastly, the company seeks to leverage its growth to increase its revenue base, investments, and its overall profitability so that it can build a defense for itself in the event of changes to the overall business landscape, a response to a shortcoming in a previous plan which fell short due to such changes (Sony Corporate Report 2025, pg. 32).

To get more specific to a particular group, the goals of Sony Interactive Entertainment, the division responsible for Sony's video game markets, are to leverage its expansive catalogue

of games and unique services to improve the customer experience and strengthen the PlayStation brand, which makes up two-thirds of their gaming segment (Sony Corporate Report 2025, pg. 39). The company also seeks to bolster its portfolio with more IPs and evolving the pre-existing ones. In addition, the company wishes to improve its sustainability by improving on areas that consumers are already enjoying, such as their single-player game experience by continuing to produce immersive and compelling stories. For the multi-player game experience, Sony intends to continue its live-service gaming experiences, such as *Helldivers 2* or *Destiny 2*, seeking to maintain and grow their current player-base and revenue stream. Lastly, they intend to create a multi-device ecosystem, relying upon the multitude of PlayStation products to both increase the ways in which consumers can play but also the ways in which they can customize their experience and express themselves (FY25 SIE Business Segment Presentation, pg. 19-21).

Core Competencies and Sustainable Competitive Advantage

Regarding Sony's core competencies, it maintains a strong advantage in the fact that it has a part in numerous industries ranging from technology to gaming to film and television, and across multiple countries and continents (Who We Are). Another core competency of Sony is its expansive catalogue of IPs and brands. Thanks to its entertainment segments, Sony has a hand in numerous IPs in gaming, television, movies, and animation (Sony Corporate Report 2025, pg. 7). Lastly, one other core competency of Sony is its consistent innovation and push into technological fields, such as its current push into the AI market (Naeth).

In terms of creating a sustainable competitive advantage, each of these core competencies lend themselves to creating that advantage. For starters, its foothold in several industries is no small accomplishment and it is incredibly valuable. This hold in several industries allows the company to maintain several distinct sources of revenue and allows it to maintain its original goal of innovation and evolution through technology. On top of that, the foothold it has in each of these industries allows for collaboration between each other and allows for each of its IPs to expand into fields it normally wouldn't be able to, an example of which being *The Last of Us* or *Until Dawn*, which gained a television adaptation and a movie adaptation respectively. This allows them to maximize the value of each of their IPs utilizing the pre-existing synergy the company has in each of its segments (Sony Corporate Report 2025, pg. 8, 17).

FY25 SIE Business Segment Presentation

Another competitive advantage can be found with its technological innovations. Throughout each of the industries that Sony has a hand in, each of them rely on consistent innovation and evolution of technology. Their services like PlayStation rely on improvements and innovations within console and gaming technology (Sony Corporate Report 2025, pg. 39). The same goes for their overall entertainment segment which relies on advancing technology in order to both create a superior product but also to create recurring business revenue from its consumers (Sony Corporate Report 2025, pg. 48). Lastly, as areas such as AI are being advanced on a global scale, Sony intends to use it to its advantage, seeking to create an environment in which AI can both promote creativity and enhance the experience of its users while also setting limits to what it can do so that it can be used “safely and appropriately” (Sony Corporate Report 2025, pg. 20). It also seeks to use AI to protect its IPs and products from potential infringement, keeping them from being used inappropriately and protecting themselves from potential complications.

Current Target Market

The current target market for Sony’s gaming industry and PlayStation are gamers below the age of 35, consisting of Millennials and Generation Z (Lee). These two generations make up the majority of PlayStation Plus users, PlayStation’s online subscription service (PlayStation® Plus). In addition, North America, Europe, and Japan make up the vast majority of PlayStation’s overall sales (Platform Totals). North America and Europe in particular make up between 30 to 39% of sales for the PlayStation 4 and PlayStation 5 each. In all, it’s clear the target market for Sony and its G&NS segment are individuals in their teens all the way into their 30s within North America and Europe.

4. Competitor and Industry Analysis

Industry Analysis

In the modern day, the gaming industry only continues to grow. In the late 2010s and 2020s the industry was amassing hundreds of billions in revenue, and in 2022 specifically, the gaming industry generated \$183 billion revenue (Rao). The industry is incredibly expansive and has several different markets within itself. The mobile gaming industry for example amassed \$101 billion in revenue in 2022. As for the console market, it amassed \$30 billion while the PC market amassed \$45 billion.

In terms of current console sales between the PlayStation 5, Xbox Series X, and the Nintendo Switch 1 and 2, PlayStations make up around 29.5% of the overall sales with 82.53 million total sales (Platform Totals). While that is higher than Xbox with its 12.1%, that still pales in comparison to Nintendo with its combined 58.3% of total sales, including Switch 1 and 2. While Sony is currently well positioned, its position could be stronger. In order to remain competitive, it's imperative for Sony to find new ways to innovate upon its products and consoles to gain a stronger foothold in the gaming industry.

Competitor Analysis

Alongside Sony and the PlayStation, there are two major competitors to them in the console gaming industry, these being Nintendo and Microsoft. Each of these companies produce their own consoles which are intended to rival PlayStation within the industry. Nintendo has a plethora of consoles, including the Switch and the Switch 2, and Microsoft is responsible for the Xbox series of consoles. In terms of sales, the majority of consoles are below the PlayStation 4 or the PlayStation 5 barring the Nintendo Switch.

Each company holds a competitive advantage over Sony in different ways however. Microsoft and the Xbox hold an advantage of their own vast industries. Microsoft, of course, owns Windows and other affiliated applications thus granting it a large source of revenue outside of just gaming, which could be used to reinvest in the gaming segment. In addition, Xbox also has Game Pass, a similar type of subscription to PlayStation Plus, which grants discounts to subscribers (Xbox Game Pass). However, the difference between them comes from the fact that PlayStation Plus requires you access higher tiers to gain what Game Pass offers. On top of that, Game Pass typically offers newer games in comparison to PlayStation Plus, sometimes to its own detriment (Litchfield).

In terms of competitive advantages that Nintendo holds, they've been in the industry for far longer than PlayStation. Their first console, the Nintendo Entertainment System, came out in 1983 which was over 10 years prior to the first PlayStation which came out in 1994 (Nintendo History; PlayStation History 1994). This gives them a major advantage as they have more experience in the industry and their consumers have been loyal to them for longer. On top of that, they hold a unique market within the industry, that being family-friendly gaming with a plethora

of unique IPs. While not all of their games are specifically for kids, the majority of them are and are marketed in such a way that they'd be good for kids and good for families, showing an emphasis on the parents as well who would have to buy their kid the games (Family Time Is Play Time with Great Games and More from Nintendo).

5. SWOT Analysis

Since being founded in 1946, Sony has been able to create a strong brand image globally, and have strong brand recognition across its products. This has been achieved through its marketing strategy, which caused it to gain a deep understanding of its target audience and allowed it to create products which served their customers' needs (Pereira). The company has been able to produce high quality products that consistently resonate with consumers through its brands, which has not only enhanced the brand recognition of its individual brands but also of the parent company (Sony Group Corporation). Since its release in 1994 in Japan, PlayStation has gone on to dominate the gaming console market. As of 2025, PlayStation holds the largest gaming console market share globally at around 45%, which demonstrates strong market awareness and adoption (Mahajan). It has also gone on to become the single largest source of revenue for Sony, contributing heavily to the overall business. Sony's Game & Network Services segment, which includes PlayStation hardware sales, digital game sales, and subscriptions like PS Plus, generated ¥1.1 trillion in Q2 FY2025, while the entire business generated ¥3.1 trillion (*Q2 FY2025 Consolidated Financial Results*). This means that around 35.8% of Sony's revenue comes from PlayStation related sales. Another strength of Sony's is its strong portfolio of brands across multiple industries. Some of its brands include PlayStation, Columbia Pictures, and RCA Records (*Affiliated Companies - Sony Group Portal*). These companies operate under different subsidiaries and segments of the parent company, and are a vital part of Sony's portfolio of brands. These brands are globally known for excellence in their respective fields, and provides Sony with strong brand loyalty to add to its operations. Sony and its brands have a long history of innovation and being ahead of their competitors. Their positioning in post-war Japan caused them to develop innovative strategies in order to be successful. Some of their innovations over the years include the Walkman, the Betamax, and the development of CDs and DVDs (Naeth). Sony was able to co-develop the CD along with Phillips in 1979 and was instrumental in the later development of DVDs and the technology associated with them. Sony is currently well positioned financially, with a strong outlook on the future. The company reported revenues of ¥3.1 trillion (\$20.1 billion) for Q2 FY2025, an increase from the ¥2.97 trillion (\$19.3 billion) in Q2 FY2024. The company sold an additional 3.9 million PlayStation 5 units during Q2, with the total lifetime sales totaling 84.2 million units (McEvoy). The company has a 3-year revenue growth rate of 10.4% (*Sony Reports Significant Revenue and Operating Income Growth*), which is impressive for a conglomerate of its size. In terms of its outlook, management is calling for an

8% increase in its full-year profit forecast, and expects its segments (specifically the anime segment) to continue to perform well.

Q2 FY2025 Results for Continuing Operations^{*1}

(Bln Yen)	Q2 FY24	Q2 FY25	Change
Sales	2,971.2	3,107.9	+136.7 (+5%)
Operating income	389.3	429.0	+39.6 (+10%)
Operating income margin	13.1%	13.8%	+0.7 pts
Income before income taxes	384.5	441.8	+57.3 (+15%)
Net income attributable to Sony Group Corporation's stockholders	291.8	311.4	+19.7 (+7%)
Net income attributable to Sony Group Corporation's stockholders per share of common stock (diluted) ^{*2}	48.04 yen	51.71 yen	+3.67 yen
Average Rate			
1 US dollar	149.5 yen	147.4 yen	
1 Euro	164.1 yen	172.2 yen	

^{*1} The above results represent the results for continuing operations. For Q2 FY25 results on a consolidated basis including the discontinued operation, refer to "Consolidated Financial Summary for the Second Quarter (Semi-annual)" Ended September 30, 2025 (applies to all following pages).

^{*2} Sony Group Corporation conducted a five-for-one stock split of its common stock effective October 1, 2024, with a record date of September 30, 2024. The above figures for Net income attributable to Sony Group Corporation's stockholders per share of common stock (diluted) are calculated based on the assumption that the stock split was conducted at the beginning of FY24.

2

Q2 FY2025 Consolidated Financial Results

Some of its main industries, including gaming, electronics, and entertainment are some of the most competitive industries globally. Some of its competitors in the gaming sector include Microsoft and Nintendo in terms of hardware. For the electronics sector, some of its major competitors include Panasonic and Samsung, with products like televisions, cameras, and audio equipment, which directly compete with Sony's product lines (Products & Services). Sony's attempt to provide a unique user experience has emerged into an over-reliance on exclusive game titles. Consumers' disappointments over recent failed exclusive game launches have resulted in lower brand reputation and loyalty (Bhasin).

An opportunity for the company is expansion to target the PC market, as they already have a dominant position in the console market and could push to expand their target audience to include PC users. This can be done through the introduction of a console that retains most of its console features, but includes PC level specifications and features that expands their potential consumer base. The PC gaming market is a large market, and often competes with consoles like PlayStation for customers. In terms of total gaming revenue, the "PC segment accounted for roughly 23% of total gaming revenue in 2024 (~\$43 billion)" (Lee). The global PC gaming market is expected to have a CAGR of 8-9% until 2032, with an expanding total gamer base. Sony is well positioned to capture a portion of the market if it can effectively market and launch

this proposed console/PC hybrid. Expansion into countries that don't have a large Sony/PlayStation presence is also a large opportunity for Sony to grow their revenue sources and their overall business. New exclusives to expand PlayStation's brands would help grow the brand and retain users by providing content that cannot be accessed anywhere else. "SIE's IP business successes are achieved by its transformative focus on robust development cycles and operational efficiencies while continuing to deliver memorable experiences through games and films globally" (Sony Corporate Report 2025, pg 39).

The gaming industry and Sony's broader business (including electronics, entertainment, and financial services) is susceptible to threats including economic slowdowns, as these industries are dependent on economic conditions. As the global economy enters into a downturn, consumers have less discretionary income, and as a result purchases for electronics and other consumer discretionary goods and services decrease. This in turn affects both Sony's top and bottom lines and overall financials. Increasing competition from companies like Nintendo, Microsoft, and the broader PC gaming market is another threat to the company. The recent release of the Switch 2, and the growing market share of PCs in the global gaming market are all putting competitive pressure on Sony and its PlayStation brand.

6. Growth Strategies

We intend to grow by targeting the rapidly growing PC market and pairing it with our already strong and loyal console customer base. Sony also has a large presence in the overall gaming industry, which can be leveraged to grow the company in new markets. By targeting the PC market, we will be able capture a rapidly growing segment of the gaming industry and translate the growth in adoption into returns for the company's bottom line. The overall global PC gaming market was worth \$76.73 billion in 2024, and is expected to reach approximately \$152 billion in 2030 (PC Gaming Market Size Statistics (2025)). This is roughly double the current market size, and would represent a significant opportunity for Sony.

PC Gaming Market Size Statistics (2025)

We intend to bring plenty of new users into our ecosystem with our new console. It will have a variety of new features that have never been included on gaming consoles before. This will include more customizable graphics settings, which are much closer to what you would see on a PC. It will also include an in-game and out of game customizable graphics overlay. This can include things like framerate, gpu usage, etc. Furthermore, we are making our controllers more comfortable and customizable, through better fit and feel on the hands, better controller vibration, and improved responsiveness in order to rival other consoles and PCs. We will simultaneously focus on an improved hardware to better compete with PCs. Our consumers would likely seek a greater quality of graphics, as evidenced by the rise of graphics hardware and their sales within the industry (Duarte). We also are improving upon PlayStation Plus, offering more games at a cheaper price, including most of our PlayStation exclusives. This in turn will cause more people to purchase PlayStation Plus every month or year on a subscription plan, generating more recurring revenue for the company. We are also going to use surveys to determine which traits among PlayStations, Nintendo Switches, Xboxs, and PCs are most desirable among consumers. The survey questions will consist of the following:

- 1.) Have you ever played video games?
- 2.) Do you still play video games?
- 3.) If answered “yes” to 1 or 2, what games and on which consoles?
- 4.) Why did you choose this specific console?
- 5.) What did you like or dislike about the console in terms of the features and the overall experience?

- 6.) Would you consider getting another console? If so, which console and why?
- 7.) If a console/PC hybrid came out how likely would you be to purchase this console on a scale of 1-10?
- 8.) What features would be most important or appealing to you on this new product?

We will then use this data to determine which traits to include in our new console. This will bring more people into our ecosystem and to the Sony brand in general, which will provide more leverage and potential growth for the gaming segment. We have to make sure to stay culturally relevant and build a cultural brand, both in each region and as a broader brand. Combining this data and using it to create and market our console is the core of our growth strategy. After we launch the console our incentive is to make incredible games that are very distinct, high quality, immersive, and difficult to replicate quickly. These will be the most important things in keeping our ecosystem thriving, while also driving growth through our systems.

One of our weaknesses as of recent is the over-reliance on PlayStation exclusive titles. This led to more of our financials and consumer base being tied to these names. Failed launches and poor reception to many of these titles led to a decline in reputation and loyalty. In order to mitigate this and shore up this weakness, we will focus on producing fewer, higher-quality exclusive titles in order to ensure that launches are successful and attract more consumers to our ecosystem. This will subsequently provide us with more recurring revenue year after year and improve our brand positioning over time.

7. Target Markets

Within our target markets, we have to look at four key criteria to segment them, the geographic, demographic, psychographic, and behavioral segments (Kerin & Hartley, pg. 252-253). The first segment of potential buyers includes current console users and individuals looking to purchase a console. This group would be grouped as some would already have a console and be familiar with one, and others would be open to purchasing one. Since the PCStation is in a console format, both of these groups would be open to purchasing the product. A second group would be individuals looking to purchase a PC without spending too much, and individuals who are currently PC users who are looking to switch to a console. In both cases, the PCStation provides a good alternative as it is an inexpensive option for the person looking to purchase a PC, and also provides the familiarity and the console feel that the individual looking to switch to a console from PC is looking for. On top of just the price point and familiarity, another factor of importance to the consumer would be hardware. Graphics hardware is a rising market and a potential concern we could tackle by focusing on superior graphics to other consoles, showing a level of superiority in the product while also appealing to the many individuals who consider that an important factor (Duarte).

In terms of demographics segments for our consumers, statistics show that currently the market is relatively evenly split between male and female gamers (Essential Facts About the U.S. Video Game Industry, pg. 9). In terms of age, console gamers show a larger skew towards millennials and younger generations while PC gamers show a more even distribution across all generations (Essential Facts About the U.S. Video Game Industry, pg. 16). As previously mentioned as well, North America, Europe, and Japan would be the main geographic markets we should focus on as they make up the majority of our sales (Platform Totals). Among these individuals, the majority of them who play for more than 1 hour per week also skews more into the younger demographic, with Generation Alpha and Z being more than 10% more likely to do so than millennials or older generations, likely due to the amount of free time they have in comparison. (Essential Facts About the U.S. Video Game Industry, pg. 9).

In terms of product grouping, the PCStation could be grouped together with a few key accessories and services. When first purchasing the product, it will come with a brand new controller. Other products can be bought alongside the PCStation as add-ons in order to enhance its capabilities and the consumer's overall experience. This includes the PlayStation Plus service, which is an integral part of the experience, and additional accessories including headphones, keyboard, controller add-ons, and other items.

Key: P = Primary Market; S = Secondary Market					
Market Segments		Gaming Product			
General	Group With Needs				
		PlayStation 5	Xbox Series X	Nintendo Switch 2	Gaming PC
Gender	Male	P	P	P	P
	Female	P	P	P	P
Age	0-20	P	P	P	P
	20-40	P	P	P	P
	40+	S	S	S	S

Needs	Price	S	S	P	S
	Performance	P	P	S	P
	Experience	P	P	P	P

The target market we will focus on, based on the data we have acquired, is gamers between Generation Alpha and Millennials. Of the segments we divided our consumer base into, the majority of them fit between Generation Alpha and Millennials, having both played on consoles and PCs. By also prioritizing our market within North America, Europe, and Japan, we'll be able to hit our largest target audience who make up the majority of our sales. The cost of reaching these groups would be relatively minimal thanks to services like social media being a powerful tool to reach them. We expect that the market will grow as well thanks to data showing the rapid growth of both the PC and console markets within the past few years (Rao). While our product has aspects that aren't unique to it and are found within our competition, our product as a whole is in a relatively untapped market, a console with aspects of a PC which hasn't been done in the past to such a scale.

The marketing actions we will take to reach our target markets are to focus heavily on social media marketing and our overall social media presence. Two of our largest target demographics, Generations Alpha and Z, are heavily involved on social media and get most of their information from marketing campaigns on these platforms. We will ensure to leverage our social media presence and technological expertise to reach as many potential consumers as possible. On top of that, we'll utilize our omnichannel method of distribution to ensure that it reaches our target markets across the world.

8. Points of Difference and Positioning

The points of difference that make the PCStation unique compared to its competitors are the following:

- *Integration of PC elements into a Console:* The PCStation will effectively integrate various key elements traditionally found on gaming PCs into a console. These elements include a gaming overlay, enhanced graphics customization capabilities, and superior hardware relative to competitor's products. All of these features are combined with the simplicity and ease of use of a console. The PCStation will be able to effectively integrate the gaming PC and console elements into one product, providing a huge differentiator that intersects two of gaming's largest markets.

- *Price Point*: The PCStation will be priced at \$725, which would be slightly more expensive than consoles sold by our competitors, but will be cheaper than most gaming PCs, especially mid to higher level ones, which provides a cost effective and budget friendly option for millions of gamers.

- *Sony/PlayStation Ecosystem*: One of the biggest advantages for Sony is its PlayStation ecosystem, which has differentiated itself from its competitors and is a major reason why PlayStation has a majority market share in the console market. We will be able to integrate the PlayStation ecosystem on the PCStation, which will be a major differentiator from our competitors and allow individuals to easily transfer over and use something they are familiar with.

Positioning

Previously, gamers would have to choose between console and PC. However, with the release of the PCStation, individuals can get the best of both worlds at a much cheaper price than most gaming PCs. It gives Sony access to two giant markets and combines them into one, while leveraging their current ecosystem and userbase.

9. Marketing Program

Our Marketing Program will consist of the 4Ps, which are Product Strategy, Pricing Strategy, Place, and Promotion. We will analyze each and determine what our best strategy is for each in terms of launching the PCStation. This will help us assess the market and give us a competitive advantage over our competitors, ensuring that the product has the best possible chance to succeed.

Product Strategy

Our product strategy is to combine two markets, the console and the PC gaming market, into one product. The product will be a console/PC hybrid that contains PC features within a console layout. Some of these features include a gaming overlay, increased graphics customization, and improved hardware. The PCStation will provide an alternative for individuals looking to capture the best of both worlds without having to choose between one or the other.

Pricing Strategy

The PCStation will retail for \$725. We will price our product to be more expensive than a regular PlayStation 5 console, which retails for \$550, but slightly less than the PlayStation 5 Pro, which retails for \$750. This allows us to capture individuals who want to buy a gaming PC, but want a slightly more affordable and versatile option. Simultaneously with the release, we'll offer superior deals on PlayStation Plus along with deals on higher-end or Triple-A games in order to

both incentivize the purchase but also encourage further purchases while ensuring they remain in the PlayStation ecosystem.

Place

In terms of place, we will utilize the same omnichannel model that Sony currently uses. We will sell the PCStation on the PlayStation website, across various ecommerce platforms like Amazon and Target, and in brick-and-mortar retail locations like Best Buy and Walmart. This will allow us to leverage our current layout and partnerships in order to maximize product visibility and sales.

Promotion

We will promote the product by focusing on a strong presence on social media. This can include social outlets such as Instagram and Facebook, where we will partner with creators and consumers to directly review and discuss our product. We will also invest heavily in advertising and marketing the product through these social media platforms in order to grow appeal and interest. In addition to our social media approach, we will also target in store optimization, ensuring that the PCStation layouts are in an optimal location with a display that is decorated and captivating. This strategy will help sell to consumers who prefer to shop in store and capture the attention of in-store shoppers who pass by the section.

10. Evaluation of Success

We will evaluate our success post product launch based on a variety of factors, including quantitative (financial) and qualitative. In terms of evaluating the financial factors, we will be splitting up our assessment into two groups, which are first year performance and five year performance. For the first year, we will evaluate our performance by assessing how many units were sold in the year and how it compares to other gaming systems and consoles on the market. Next, we will find the total revenue generated from these sales along with the total profit for the year. Lastly, we will assess how much of the market we were able to capture and see the total market share we were able to achieve in the first year. In the five years following the launch, we will expand on our financial analysis to evaluate success. First, we will evaluate how many units were sold in each of the five years and analyze the growth rate for sales in each year. From this, we will derive the total profit we were able to generate each year and for the five year period post-launch. We will then analyze the product's market share in the five years after the launch, and compare it against prior years to see if its share has been growing over time. This is a significant indicator of success and widespread adoption of our product. Lastly, we will compare the actual demand for the product to the expected demand forecasted by the company to see if sales exceeded expectations. In terms of qualitative success, we can see this through how well

the product was received by users and critics. This can generally be seen through website reviews, online forums, surveys, critic reviews, and other sources. We will then aggregate these sources to get a better understanding of what individuals think about the quality of our product and compare it to the rest of the market.
